The ultimate coloured porous asphalt surface

# ULTICOLOUR POROUS

The ultimate coloured porous asphalt surface

**ULTICOLOUR POROUS**  
*is a range of coloured porous asphalts combining vibrant colours with excellent drainage and water management. This aesthetic all-weather surface is ideal for car parks, low speed residential roads, playgrounds and sports surfaces and offers enhanced safety and demarcation on cycleways and footpaths.*

## **BRIGHT LONG-LASTING COLOURS**

ULTICOLOUR POROUS asphalts use a clear polymer modified binder, pigment and colour matched aggregates to produce bright, long lasting porous coloured asphalts with deeper colours that resist surface wear.

## **SAFE, ALL-WEATHER SURFACE**

When used with a porous base and binder course, ULTICOLOUR POROUS asphalts allow water to filter through, which eliminates the problem of standing water and surface ice that forms in cold weather conditions. The bright coloured surface can also be used for visual demarcation of footpaths and parking bays.

## **WATER CAPTURE AND STORAGE**

By trapping pollutants within the pavement Tarmac's porous asphalts have been shown to improve the quality of surface water run-off. As well as having clear environmental benefits, this also allows rainwater to be captured and stored for use as an amenity in things like car washing or window cleaning.

## **IMPROVED PLANNING COMPLIANCE**

ULTICOLOUR POROUS asphalts are BBA accredited when used as part of Tarmac's UltiSuDS porous asphalt surfacing system. It is proven to delay and manage surface water run-off and improve water quality, which helps compliance with current planning requirements including Schedule 3 of the Floods and Water Management Act 2010.

## **ACCREDITED CONTRACTORS**

ULTICOLOUR POROUS can be laid quickly over large areas using standard paving equipment, just like a conventional asphalt. They are only available for installation by accredited contractors who have full access to expert training, advice and technical support. This ensures that the client receives an excellent finish and a porous surface that delivers excellent performance. Tarmac also supply an aftercare document with guidance to client end-users on how to maintain a porous pavement.
