ULTIFASTPAVE

The ultimate fast maintenance resurfacing solution

ULTIFASTPAVE has been developed as a single layer application for urban and estate roads, that require a cost effective durable surface course. This avoids the need for a binder and surface course, for reduced construction times.

AVAILABLE WITH
ULTILOW
TECHNOLOGY

ULTIMATE TIME SAVING

Single layer application means significant reductions in project delivery times compared to dual layer resurfacing.

FASTER COMPLETION

Shorter project delivery times mean less disruption for road users.

LASTING DURABILITY

Single layer application improves compaction, reducing insitu air voids in the finished layer thereby improving long term durability.

ULTIMATE SOLUTIONS

Designed as a 14mm nominal sized product that provides a dense finish at up to 75mm thick. ULTIFASTPAVE is proven as an invaluable solution for planned maintenance regimes.

CAR PARK SURFACING

ULTIFASTPAVE can also be used as a fast, single layer surfacing solution for car parks, helping to reduce construction times, while delivering long term durability.

ULTIMATE SUPPORT

At Tarmac, technical excellence comes as a standard. To ensure our customers get the best possible results, we provide full training and expert support is never more than a phone call away.
