

ULTIPLAY

The ultimate durable play surface

ULTIPLAY

The ultimate durable play surface

Specifically developed for recreational applications, ULTIPLAY is a dense, low texture asphalt, designed to provide a safe play surface and deliver long term durability in demanding environments like playgrounds and skate parks.

SMOOTHER SURFACE

Using specifically selected 6mm aggregate and a modified binder, ULTIPLAY is normally laid in a 25mm layer and delivers a smooth, even surface with long-lasting durability.

BETTER FINISH

The modified binder improves workability during construction, making it easier to achieve good compaction and a consistent finish.

IMPROVED SAFETY

The even monolithic surface avoids trip hazards and is also suitable for use by wheelchairs. It is also available with a fine, high quality limestone aggregate that is less abrasive to the skin in the event of a fall.

LOWER MAINTENANCE

The dense, durable surface is designed for heavy use and resists frost damage in winter and softening in hot weather, to keep its finish for longer. It is also suitable for occasional vehicle parking.

CHOICE OF COLOURS

Available in black and red as standard, there are also a wide range of other colours available as part of our ULTICOLOUR range, with a choice of aggregate to suit site requirements.

ULTIMATE SUPPORT

At Tarmac, technical excellence comes as standard. To ensure our customers get the best possible results, our expert support and advice is never more than a phone call away.
