A specially formulated mortar

# HYDROCURE

A specially formulated mortar

***HYDROCURE has been specifically formulated to enhance the performance of mortar, and lessen the effect of moisture migration when used in conjunction with high suction masonry units. With the qualities of a dry silo pre-blended mortar, once mixed, HYDROCURE is an instant, workable mortar with the added benefit of improving water retention to allow >90% retentivity.***

To find out more about our range of MORTARS and the best solution for your project call **03701 116 116**

**TARMAC.COM**

## **EASE OF USE**

As the water is retained in the mortar, it allows the bricks and blocks to be adjusted over a much longer period and averts problems with pointing of the mortar, which can occur when mortar becomes too dry.

## **IMPROVED WORKABILITY/ BLEED REDUCTION**

Reducing the migration of water from the mortar joint into the bricks and blocks allows the bricklayer to close the joint more effectively.

## **ENHANCED PERFORMANCE**

HYDROCURE'S enriched water retentivity over standard mortar allows cement content to fully hydrate during warm summer months, improving bond strength and the quality of build.

## **QUALITY ASSURED**

All Tarmac products are manufactured in the UK and certified under BES 6001 Responsible Sourcing. Our mortars are compliant to BS EN 998-2:2010 ensuring our customers receive unrivalled quality and technical expertise.
